

regarding: <http://forum.softmaker.com/viewtopic.php?f=321&t=20756>

test typed text for reporting a bug in typing persian numbers when mixed with persian text), in case 'c' which is 'a mixed type of numbers and persian text' the numbers are wrongly(both direction and the numbers are wrong) typed (521 + 75 = 281) while the numbers should be typed like case A and B, in case B

for more information the problem is in macos and linux(debian) while i do not have this problem in windows. for more information the first version I found out about free office textmaker I used on linux(opensuse) with no problem for loading default persian font and with no problem for typing numbers mixed with persian text (that was some 4-5 years ago)

A: $57 + 125 = 182$ (being typed all in english and all in left-to-right option)

B: $۵۷ + ۱۲۵ = ۱۸۲$ (being typed in persian keyboard only for numbers and mixed with this english text , all numbers are correctly typed)

C : (تایپ شده مخلوط با نوشته های فارسی) $۵۷ + ۱۲۵ = ۱۸۲$
